

PAINT ARRESTOR BOOTH PAPER

3000 Series Standard:

- 6 layers of slit and expanded kraft paper
- depth loading provides longer service life
- biodegradable
- efficiency is 96.5-97.5% on high solids bake enamels

3100 Series Hi-Capacity:

- 8 layers of slit and expanded kraft paper
- similar to 3000, but holds twice as much overspray
 - less down time to change out filters
 - fewer change outs to reduce labor costs
 - reduces disposal costs
- biodegradable
- efficiency is 95-96% on high solids bake enamels

3200 Series Spra-Gard High Efficiency:

- 5 layers of paper and 1 layer of light polyester
- similar to 3000, with an added layer of polyester to increase efficiency
- efficiency is 98.5-99.5% on high solids bake enamels
- increased efficiency provides:
 - less booth and stack cleaning
 - less coating particulate introduced into the environment

3300 Series Spra-Gard High Efficiency:

- 5 layers of paper and 1 layer of heavy polyester
- similar to 3000, with an added layer of a "heavy" polyester to provide maximum efficiency
- maximum efficiency of 99.5-99.9% on high solids bake enamels
- maximum efficiency provides:
 - significantly less booth and stack cleaning
 - 50% less coating particulate introduced into the environment, then the 3200 series
